

Branch 2: Coordination Circle

The Coordination Circle is the branch focused on execution and cross-team coordination. If the assembly is akin to the legislative body (deliberating and authorizing actions) and the council is like a judicial/oversight body, the coordination circle is comparable to the executive branch of the node. It is typically a small group of members tasked with turning the assembly's decisions into concrete plans and ensuring missions run smoothly. This circle handles day-to-day operational decisions that don't require a full assembly vote, coordinates logistics between teams, and makes sure the necessary resources and information are in place for missions. Composition: The Coordination Circle is usually composed of representatives or leads from each sub-team or functional area in the node. For example, if a node has several teams, each team might send one Coordinator to join the circle (hence the name of the role). Alternatively, the circle can be an elected committee of a manageable size (perhaps 5–7 people) who have the mandate to coordinate missions. The FCF framework leaves some flexibility in how the circle is formed, but the underlying idea is that *those who are closest to operations and logistics are in the room to synchronize efforts*. Common roles in a Coordination Circle (often drawn from the "Common Ops Pack") include a Coordinator (general operations lead), communications lead, logistics lead, and safety/security lead. These roles mirror the needs of running missions: for instance, a Logistics Lead ensures supplies and venues are ready, a Comms Lead handles information dissemination, etc., and the Coordinator role ties it all together. The Coordinator is effectively the facilitator of the Coordination Circle and the point-person for implementing assembly decisions. Functions: The Coordination Circle meets more frequently and informally than the full assembly – possibly with quick syncs multiple times a week or as needed before and during missions. In these meetings, they break down assembly-approved missions into actionable steps: assigning teams or individuals to tasks, scheduling, and addressing

any inter-team dependencies. They also do feasibility checks on proposals *before* or during assembly discussion. One of the key contributions of the Coordination Circle is to assess “Can we actually do this?” for any given plan. In fact, feasibility is explicitly one of the three criteria every mission must satisfy (alongside alignment and community desire). The Coordinator role, in particular, is responsible for evaluating a proposal’s practicality: do we have enough people, skills, time, and resources to execute this mission successfully and safely?. The circle will often refine proposals *prior* to the vote – e.g. adjusting scope or adding contingency plans – to ensure that what the assembly approves is realistic. In essence, the Coordination Circle turns the *what* decided by the assembly into the *how*. They create mission briefs or plans, listing who is doing what, when and where it will happen, what roles are needed, and so on. These mission briefs (which can be made public in sanitized form) guide the execution once a proposal is passed. Beyond planning missions, the Coordination Circle monitors ongoing activities and responds to issues in real-time. For example, if two teams’ activities might conflict or overlap, the circle will notice and deconflict schedules. If a mission runs into trouble (bad weather, loss of a venue, etc.), the circle can make quick decisions to adapt, under the broad authority given by the assembly’s mandate. However, the circle’s power is bounded: they cannot authorize completely new missions or change the strategic direction without going back to the assembly; their job is to coordinate within the framework of what’s already been approved.

Coordinator Role: Within the circle, the Coordinator (sometimes also called an Operations Coordinator or Node Coordinator) is a key role analogous to a project manager or team captain for the node. This role (1) chairs the coordination meetings, (2) keeps track of all active missions and tasks, and (3) serves as the liaison between the Coordination Circle and the Assembly. The Coordinator ensures that the assembly’s decisions are implemented on time and reports back to the assembly on progress or roadblocks. They are often the one to present feasibility assessments during assembly meetings – e.g. “Our Coordinator has reviewed

this plan and identified that we'll need at least 5 trained medics, which we currently have in our roster" – giving the assembly insight into practical viability. Like all key roles, Coordinator is a rotating or limited-term position (to prevent burnout and entrenchment). Some nodes might rotate the Coordinator every mission cycle or monthly, while others might have a stable Coordinator for a quarter and then rotate. The Whitepaper suggests minimal permanent hierarchy, so even coordinators should eventually hand off duties to others in the circle to cross-train and share the load. In summary, the Coordination Circle led by the Coordinator is the engine room of the node – executing the vision with attention to detail and ensuring the feasibility of fractal action.
